| Topi <br> c | Rationale | Knowledge Acquisition | Key Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| Unit <br> 1 | Number work to be completed initially to build the foundations for the remainder of the academic year | Find the prime factor decomposition of a number less than 100 | Prime, factors, multiples, indices, giga, mega, kilo, BIDMAS, square, square root, significant figure | Can you make every number just by multiplying prime numbers? <br> How many photographs can you store on a 1 terabyte server? <br> When is it a good idea to round numbers? When is it not? |
|  |  | Find the prime factor decomposition of a number |  |  |
|  |  | Use prime factor decomposition to find the HCF or LCM of 2 numbers |  |  |
|  |  | Know and use the general forms of the index laws for multiplication and division of positive integer powers. (e.g. $\left.\mathrm{p}^{\mathrm{a}} \times \mathrm{p}^{\mathrm{b}}, \mathrm{p}^{\mathrm{a}} \div \mathrm{p}^{\mathrm{b}},(\mathrm{pa})^{\mathrm{b}}\right)$ |  |  |
|  |  | Extend the patterns by using the index law for division established for positive power answers, to show that any number to the power of zero is 1 |  |  |
|  |  | Apply the index laws for multiplication and division of small positive integer powers |  |  |
|  |  | Know the prefixes associated with $10^{\wedge} 9,10^{\wedge} 6,10^{\wedge} 3$ (giga, mega and kilo) |  |  |
|  |  | Understand the order in which to calculate expressions that contain powers and brackets in both the numerator and denominator of a fraction |  |  |
|  |  | Understand the difference between squaring a negative number and subtracting a squared number within a more complex calculation |  |  |
|  |  | Be able to simplify expressions containing powers to complete the calculation |  |  |
|  |  | Round numbers to 1 significant figure |  |  |
|  |  | Round numbers to a given number of significant figures |  |  |
|  |  | Use numbers of any size rounded to 1 significant figure to make standardized estimates for calculations with 1 step |  |  |

| Topic | Rationale | Knowledge Acquisition | Key Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| Unit 2 | Powers work follows logically from previous unit work on powers | Simplify simple expressions involving powers but not brackets, by collecting like terms | Expand, collect like terms, bracket, identity, expression, powers, indices | What does the expression $x^{\wedge} 3^{*} x^{\wedge} 2$ mean in a spreadsheet program? How many expressions can be simplified to $24 x^{2}$ $+12 x ?$ <br> How long does it take a car to slow down to enter a speed restriction area? |
|  |  | Multiply a single term over a bracket e.g. $x(x+4), 3 x\left(2 x-x^{3}\right)$ |  |  |
|  |  | Know and understand the meaning of an identity and use the identity sign |  |  |
|  |  | Simplify simple expressions involving index notation, e.g. $x^{2}+2 x^{2}, p \times p^{2}, r^{5} \div r^{2}$ |  |  |
|  |  | Simplify expressions involving brackets and powers e.g. $x\left(x^{2}+x+4\right), 3(a+)-2(a+b)$ |  |  |
|  |  | Use the distributive law to take out single term algebraic factors, e.g. $x^{3}+x^{2}+x=x\left(x^{2}+\right.$ $x+1$ ) |  |  |
|  |  | Substitute positive and negative integers into linear expressions and expressions involving powers |  |  |
|  |  | Apply the index laws for multiplication and division of small integer powers, e.g. $a^{3} \times a^{2}$, $x^{3} \div x^{2}$ |  |  |
|  |  | Construct and solve equations that involve multiplying out brackets by a negative number and collecting like terms (e.g. 4( -1 ) $=32-3(-2)$ ) |  |  |
|  |  | Know and use the general forms of the index laws for multiplication and division of positive integer powers. (e.g. $\left.p^{a} \times p^{b}, p^{a} \div p^{b},\left(p^{a}\right)^{b}\right)$ |  |  |

| Topic | Rationale | Knowledge Acquisition | Key Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| Unit 3 | Mensura tion which can be used in applicatio n problems in units 5 and 9 | Begin to use plans and elevations | Plan, elevation, formula, area, circumference, circle, radius, diameter, Pythagoras, hypotenuse, surface area, cylinder, coordinate, volume | What would famous landmarks look like photographed from above? <br> Why do African elephants have larger ears than Asian elephants? What volume of water do you need to fill a swimming pool? <br> How long would it take to fly around the world? |
|  |  | Use the formula for the circumference of a circle |  |  |
|  |  | Analyse 3-D shapes through cross-sections, plans and elevations |  |  |
|  |  | Use the formulae for area of a circle, given the radius or diameter |  |  |
|  |  | Calculate the volume of right prisms |  |  |
|  |  | Use the formulae for the circumference and area of a circle, given the circumference or area, to calculate the radius or diameter |  |  |
|  |  | Know the formula for Pythagoras' theorem and how to substitute in values from a diagram |  |  |
|  |  | Use and apply Pythagoras' theorem to solve problems |  |  |
|  |  | Calculate the surface area of right prisms |  |  |
|  |  | Calculate the lengths and areas given the volumes in right prisms |  |  |
|  |  | Given the coordinates of points $A$ and $B$, calculate the length of $A B$ |  |  |
|  |  | Calculate the lengths, areas and volumes in cylinders |  |  |

| Topic | Rationale | Knowledge Acquisition | Key <br> Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| Unit 4 | Algebra to separate two shape units | Draw and use graphs to solve distance-time problems | Graph, distance-time, function, linear, interpret, proportion, misleading, constant, rates of change | How will different exchange rates affect the amount of money you can spend on holiday? <br> How do stock-market traders use graphs to help make investment decisions? <br> What will the population of the world be in 2050? In 2100? |
|  |  | Plot the graphs of a function derived from a real-life problem |  |  |
|  |  | Discuss and interpret linear and non-linear graphs from a range of sources |  |  |
|  |  | Recognise graphs that show direct proportion |  |  |
|  |  | Discuss and interpret real-life graphs, e.g. conversion graphs, water filling baths/containers, graphs comparing e.g. mobile phone tariffs - how you can see which tariff is better for different numbers of calls |  |  |
|  |  | Use graphs to solve distance-time problems |  |  |
|  |  | Identify misleading graphs and statistics, choosing the appropriate reasons from a wide choice of options, or writing their own reasons |  |  |
|  |  | Recognise graphs showing constant rates of change, average rates of change and variable rates of change |  |  |

| Topic | Rationale | Knowledge Acquisition | Key Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Unit } \\ & 5 \end{aligned}$ | Relevant prerequisite knowledge to prepare for unit 9 | Recognise and visualise the transformation of 2D shape translation | Transformation, translation, reflection, rotation, enlargement, scale factor, similar, perimeter, area, volume | movement of images on a screen? <br> What is the centre of rotation of the centre of the Solar System? What does the zoom function do on a camera? <br> How does 25\% enlargement change the size of a photo? |
|  |  | Rotation on a coordinate grid |  |  |
|  |  | Describe a rotation on a coordinate grid |  |  |
|  |  | Describe a reflection, giving the equation of the line of reflection |  |  |
|  |  | Transform 2D shapes by simple combinations of rotations, reflections and translations, e.g. repeated reflection, rotation or translation, reflections in the $x$ and $y$ axes, rotations about ( 0,0 ) |  |  |
|  |  | Identify reflection symmetry in 3D shapes |  |  |
|  |  | Transform 2D shapes by more complex combinations of rotations, reflections and translations, e.g. a reflection, followed by a rotation, reflection in $y=x, x=-3$ and rotations about points other than the origin |  |  |
|  |  | Know that translations, rotations and reflections preserve length and angle |  |  |
|  |  | Reflection on a coordinate grid in $y=x, y=-x$ |  |  |
|  |  | Enlarge 2D shapes, given a centre of enlargement and a positive whole number scale factor |  |  |
|  |  | Recognise that enlargements preserve angle but not length |  |  |
|  |  | Enlarge 2D shapes, given a centre of enlargement outside the shape and a negative whole-number scale factor |  |  |
|  |  | Know that enlargements of 2D shapes produce similar shapes |  |  |
|  |  | Understand the implications of enlargement for perimeter |  |  |
|  |  | Enlarge 2D shapes, given a fractional scale factor |  |  |
|  |  | Know that translations, rotations and reflections map objects on to congruent images |  |  |
|  |  | Use fractional scale factors with a centre of enlargement |  |  |
|  |  | Identify the scale factor of an enlargement as the ratio of the lengths of any two corresponding line segments |  |  |
|  |  | Calculate the new area of a shape after enlargement |  |  |
|  |  | Calculate the new volume of a shape after enlargement |  |  |

| Topic | Rationale | Knowledge Acquisition | Key Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| Unit 6 | Builds on core <br> fraction, decimals, percentag e work from Year 7 | Learn fractional equivalents to key recurring decimals e.g. 0.333333..., 0.66666666..., 0.11111...and by extension 0.222222.... | Recurring, equivalent, numerator, denominator, fraction, terminating, reverse percentage, | Can you prove that 0.9999999.... = 1 ? <br> Employment has risen by $2 \%$ to 6.8 million people. How many people were employed before the increase? <br> How can you work out who has made the biggest improvements in maths tests over the year? <br> How much will your savings be worth in 3 years time if the interest rate stays the same? |
|  |  | Know the denominators of simple fractions that produce recurring decimals, and those that do not |  |  |
|  |  | Convert a recurring decimal to a fraction |  |  |
|  |  | Use an inverse operation, e.g. if I know there was a 20\% discount in a sale then the original price was multiplied by 0.8 to get the discount price. I can find the original price by dividing the discounted price by 0.8 |  |  |
|  |  | Use the unitary method for an inverse operation e.g. if I know an item was $80 \%$ of the original cost in a sale find the original price |  |  |
|  |  | Work out problems with reverse percentages |  |  |
|  |  | Use multipliers |  |  |
|  |  | Calculate percentage change, using the formula actual change / original amount $\times 100$ - where formula is recalled |  |  |
|  |  | Calculate percentage change, using the formula actual change / original amount $\times 100$ - where formula is given |  |  |
|  |  | calculate compound interest and repeated percentage change |  |  |

| Topic | Rationale | Knowledge Acquisition | Key Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| Unit 7 | There is flexibility to where this topic can be placed in the scheme due to its standalon e nature. Howvere, it must be placed before unit 9. | Draw an accurate triangle given two sides and included angle(SAS) | Triangle, quadrilateral, parallel, construct, perpendicular, compass, segment, locus, loci | How is triangulation used to make maps? <br> What area of cardboard is needed to make a box for a rolled-up poster? <br> What is the shortest distance from a point in a field to the edge? <br> What regular polygons can you draw using only a ruler and a pair of compasses? <br> How much of a car's windscreen can you wipe with two wipers? |
|  |  | Draw an accurate triangle given two angles and the included side (ASA) |  |  |
|  |  | Draw accurate quadrilaterals |  |  |
|  |  | Construct a line parallel to a given line |  |  |
|  |  | Use straight edge and compass to construct the mid-point and perpendicular bisector of a line segment |  |  |
|  |  | Use straight edge and compass to construct the bisector of an angle |  |  |
|  |  | Use straight edge and compass to construct the perpendicular from a point on a line segment |  |  |
|  |  | Use straight edge and compass to construct the perpendicular from a point to a line segment |  |  |
|  |  | Recognise and use the perpendicular distance from a point to a line as the shortest distance to the line |  |  |
|  |  | Use ruler and compasses to construct simple nets of 3D shapes, using squares, rectangles and triangles e.g. regular tetrahedron, squarebased pyramid, triangular prism |  |  |
|  |  | Draw the locus equidistant between 2 points or from a point |  |  |
|  |  | Draw the locus equidistant between 2 lines |  |  |
|  |  | Produce shapes and paths by using descriptions of loci, e.g. an equilateral triangle |  |  |
|  |  | Produce shapes and paths by using descriptions of loci |  |  |
|  |  | Use construction to find the locus of a point that moves according to a rule |  |  |

| Topic | Rationale | Knowledge Acquisition | Key Vocabulary | What percentage chance of rain would make you decide to take an umbrella? <br> What is the probability of a car breaking down due to a flat battery or a flat tyre? <br> What is the probability that a drug will stop a headache? <br> How many times do you have to flip a coin to be confident that it is a fair coin? <br> How likely are you to be to roll a double with two dice? <br> What is the probability that a baby will be born lefthanded or colour blind? |
| :---: | :---: | :---: | :---: | :---: |
| Unit 8 | Fraction and decimal calculatio ns has been covered before this, a key prerequisite to completin g tree diagrams | Use the vocabulary of probability | Probability, experiment, frequency, fractions, denominators, relative frequency, estimate, outcome, mutually exclusive, independent | What percentage chance of rain would make you decide to take an umbrella? <br> What is the probability of a car breaking down due to a flat battery or a flat tyre? <br> What is the probability that a drug will stop a headache? <br> How many times do you have to flip a coin to be confident that it is a fair coin? <br> How likely are you to be to roll a double with two dice? <br> What is the probability that a baby will be born lefthanded or colour blind? |
|  |  | Collect data from a simple experiment and record in a simple frequency table |  |  |
|  |  | Understand and use the probability scale from 0 to 1 |  |  |
|  |  | Begin to add and subtract simple fractions and those with simple common denominators |  |  |
|  |  | Know how to calculate relative frequency |  |  |
|  |  | Use relative frequency to make estimates |  |  |
|  |  | Identify all possible mutually exclusive outcomes of a single event |  |  |
|  |  | Find and justify probabilities based on equally likely outcomes in simple contexts |  |  |
|  |  | Estimate probabilities based on these data |  |  |
|  |  | Use experimentation to complete a data collection sheet, e.g. throwing a die or data-logging |  |  |
|  |  | When interpreting results of experiment use vocabulary of probability |  |  |
|  |  | Know that if probability of event is p probability of not occurring is $1-\mathrm{p}$ |  |  |
|  |  | Understand that relative frequency can be used to estimate the probability of an outcome |  |  |
|  |  | Apply probabilities from experimental data to a different experiment in simple situations (only looking at one outcome). How many successes would you expect? |  |  |
|  |  | Identify all mutually exclusive outcomes for two successive events with two outcomes in each event |  |  |
|  |  | Apply probabilities from experimental data to a different experiment (a combination of two outcomes). How many successes would you expect? |  |  |
|  |  | Identify conditions for a fair game - from a small set of simple options |  |  |
|  |  | Calculate the probability of the final event of a set of mutually exclusive events |  |  |
|  |  | Calculate the probability of a combination of events or single missing event of a set of mutually exclusive events using sum of outcomes is one |  |  |

|  | Use the vocabulary of probability to assign a probability to a complex event |  |
| :--- | :--- | :--- |
| Draw and use tree diagrams to represent outcomes of two independent <br> events and calculate probabilities |  |  |
|  | Recognise when/how to use probabilities connected with independent |  |

| Topic | Rationale | Knowledge Acquisition | Key <br> Vocabulary | Skills and Enrichment |
| :---: | :---: | :---: | :---: | :---: |
| Unit 9 | This unit needs to follow unit 7 | Use bearings to specify direction | Bearings, scale, plan, plan, view, elevation, congruent, similar | What scale would you use to fit a map of your town on a piece of paper? <br> How are bearings the same as angles? How are they different? Why is it difficult to draw an accurate world map? <br> How do artists <br> making special effects for film use similar shapes? <br> Can you use triangles to find the height of a tree? |
|  |  | Make simple drawings, demonstrating accurate measurement of length and angle (draw accurately from a plan) |  |  |
|  |  | Use scales in maps and plans |  |  |
|  |  | Draw diagrams to scale |  |  |
|  |  | Use and interpret maps, using proper map scales (1:25000) |  |  |
|  |  | Use and interpret scale drawings, where scales use mixed units, and drawings aren't done on squared paper, but have measurements marked on them |  |  |
|  |  | Solve geometric problems using side and angle properties of equilateral, isosceles and right-angled triangles and special quadrilaterals |  |  |
|  |  | Begin to use congruency to solve simple problems in triangles and quadrilaterals |  |  |
|  |  | Know and use the criteria for congruence of triangles |  |  |
|  |  | Solve simple geometrical problems showing reasoning |  |  |
|  |  | Solve simple problems using properties of angles, of parallel and intersecting lines, and of triangles and other polygons - by looking at each shape separately |  |  |
|  |  | Distinguish between conventions, definitions and derived properties by labelling given examples of each |  |  |
|  |  | Solve harder problems using properties of angles, of parallel and intersecting lines, and of triangles and other polygons - by looking at several shapes together |  |  |
|  |  | Identify 2D shapes that are congruent or similar by reference to sides and angles |  |  |
|  |  | Use the information given about the length of sides and size of angles to determine whether triangles are congruent, or similar |  |  |
|  |  | Find points that divide a line in a given ratio, using the properties of similar triangles |  |  |
|  |  | Use similarity to solve problems in 2D shapes |  |  |
|  |  | Know that triangles given SSS, SAS, ASA or RHS are unique, but that triangles given SSA or AAA are not |  |  |
|  |  | generate fuller solutions by presenting a concise and reasoned argument |  |  |

| To pic | Rationa le | Knowledge Acquisition | Key Vocabulary | Skills and Enrichme nt |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Uni } \\ & \mathrm{t} \\ & 10 \end{aligned}$ | The unit of work student s find the most challen ging. Leave this toward the end of the year when all skills have been fully develo ped. | Plot the graphs of linear functions in the form $y=m x+c$ and recognise and compare their features | Linear, gradient, intercept, inverse, parallel, perpendicular, axis | Can you predict where a line will cross the axis? <br> What does a <br> ‘Gradient <br> 12\%' road sign mean? <br> Can <br> graphs <br> help you solve <br> algebraic <br> problems ? <br> How can you tell if two lines are at right angles? <br> Can you find a function whose inverse is |
|  |  | Find the inverse of a linear function such a $x \rightarrow 2 x+5, x \rightarrow 2(x-3), x \rightarrow$ |  |  |
|  |  | 2 |  |  |
|  |  | $\bar{x} 4>5 x-4$ |  |  |
|  |  | Recognise the graph of the inverse of simple linear functions |  |  |
|  |  | Know that the gradient of a line is the change in y over change in $x$ |  |  |
|  |  | Without drawing the graphs, compare and contrast features of graphs such as $y=4 x, y=4 x+6, y=x+$ $6, y=-4 \mathrm{x}, y=x-6$ |  |  |
|  |  | Recognise that when the linear and inverse of a linear function such as $y=2 x, y=3 x$ are plotted, they are a reflection in the line $y=x$ |  |  |
|  |  | Know and use $y=m x+c$ for any straight line |  |  |
|  |  | Be able to work out when a point is on a line |  |  |
|  |  | Know for a straight line $y=m x+c, m$ is the gradient and $\quad m=$ (change in $y$ ) $\div$ (change in $x$ ) |  |  |
|  |  | Recognise that any line parallel to a given line will have the same gradient |  |  |
|  |  | Know that a line perpendicular to the line $y=m x+c$, will have a gradient of - |  |  |
|  |  | $\frac{1}{m}$ |  |  |
|  |  | Recognise when lines are parallel or perpendicular from their equations |  |  |
|  |  | Recognise when lines are parallel and where a line crosses the $y$-axis from the equation of the line |  |  |
|  |  |  |  |  |
